

SUPPLY CHAIN

ISSUE

Invoice processing has always been highly manual for **€15bn global logistics companies**. It involves dozens of people processing hundreds of thousands of invoices on an annual basis.

Letaba Logistics embarked on an RPA programme where a number of Finance activities were reviewed to determine which could be automated.

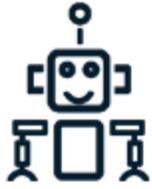

At the time, one of the areas they wanted to automate was invoice processing. However, following an assessment, the decision was made to **deprioritise invoice processing due to the complexity of semi-structured documents coupled with a lack of extensive Intelligent Document Processing capabilities** within their RPA platform. This was a common issue for many organisations.

SOLUTION

With the **increasing sophistication of technology**, Letaba Logistics was able to benefit from an intelligent invoice processing Proof of Concept (PoC), which could be applied to a number of different document types.

Our Intelligent Document Processing tool re-engages the Accounts Payable team and began to prove the value of IDP. We analysed the current process and designed the future process prior to implementing a solution that could be scaled and reused.

Our Intelligent Document Processing (IDP) solution captures invoices using Intelligent Automation. It then extracts, classifies and validates invoice data, which includes Machine Learning for ongoing training of invoices. If there is data that cannot be matched, this goes for verification by a human but the points that need to be checked are clearly highlighted, so takes minimal effort. The invoice is then processed in the ERP system using Intelligent Automation.
